## **RF Exposure Evaluation Result**

## 1. Requirement

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

Limits for General Population/Uncontrolled Exposure

(B) Limits for General Population / Uncontrolled Exposure

| Frequency Range<br>(MHz) | Electric Field<br>Strength (E)<br>(V/m) | Magnetic Field<br>Strength (H)<br>(A/m) | Power Density (S)<br>(mW/cm <sup>2</sup> ) | Averaging Time $ \mathbf{E} ^2$ , $ \mathbf{H} ^2$ or S (minutes) |
|--------------------------|---|---|--|---|
| 0.3-1.34                 | 614                                     | 1.63                                    | (100)*                                     | 30  |
| 1.34-30                  | 824/f                                   | 2.19/f                                  | (180/f)*                                   | 30  |
| 30-300                   | 27.5                                    | 0.073                                   | 0.2  | 30  |
| 300-1500                 |   |   | F/1500                                     | 30  |
| 1500-100,000             |   |   | 1.0  | 30  |

Note: f = frequency in MHz; \*Plane-wave equivalent power density

## 2. Calculation Method

$$E(V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power Density:  $S(mW/cm^2) = \frac{E^2}{377}$ 

E = Electric field (V/m)

P = Peak RF output power (mW)

G = EUT Antenna numeric gain (numeric)=

**d** = Separation distance between radiator and human body (m)

The formula can be changed to

We can change the formula to:

$$S = \frac{30 \times P \times G}{377 \times d^2} \text{ or, } d = \sqrt{\frac{30 \times P \times G}{377 \times S}}$$

From the peak EUT RF output power, the minimum mobile separation distance, d=0.2m, as well as the gain of the used antenna, the RF power density can be obtained.

## 3. Estimation Result

| Mode | Frequency (MHz) | PK Output | Output | Antenna | Antenna  | MPE (mW/cm <sup>2</sup> ) |  |
|------|-----------------|-----------|--------|---------|----------|---------------------------|--|
|      |                 | power     | power  | Gain    | Gain     |                           |  |
|      |                 | (dBm)     | (mW)   | (dBi)   | (linear) |                           |  |
| GFSK | 2406            | 8.40      | 6.92   | 2.0     | 1.58     | 0.002176                  |  |
|      | 2442            | 7.98      | 6.28   | 2.0     | 1.58     | 0.001975                  |  |
|      | 2474            | 7.61      | 5.77   | 2.0     | 1.58     | 0.001815                  |  |

Note: The estimation distance is 20cm

**Conclusion: PASS**
